

A detailed illustration of a workshop session in a modern office. Several participants are seated at long wooden tables, working on laptops and taking notes. In the background, a facilitator stands near a whiteboard displaying diagrams, while another person stands by a bookshelf. The scene is bright and collaborative.

Workshop 0 — Attendee Materials

Setup and Expectations · Version 1.0 · Session Date: [DATE] · Facilitator: [FACILITATOR]

REFERENCE SHEET

BRING TO SESSION

What This Document Is

Your Session Reference

This is your reference sheet for Workshop 0. Bring it to the session, either printed or open on your device.

There is nothing to complete in advance. Some sections have space for notes during the session.

What We Are Doing Today

Workshop 0 is a setup session. We are not building anything yet — we are making sure the foundations are right before we do.

By the end of this session, we will have agreed on the key decisions that shape every workshop that follows.

→ Platforms & Environments

Which platforms and environments are we looking at

→ Ownership

Who runs the workshops and who owns which data inputs

→ Time Window

What time window are we working with

→ Working Documents

Where working documents live and how we manage versions

The Five Workshops at a Glance

No.	Title	Duration	Focus
0	Setup and Expectations	35–45 min	Foundations, scope, and ways of working
1	Scope, Glossary, and Rules of the Game	90 min	Shared language and boundaries
2	Cost Taxonomy and Baseline Model	2 hours	Classification and current-state costs
3	Allocation Rules and Unit Economics	2 hours	Distributing costs to outcomes
4	Value and Risk Scorecard	90 min	Assessing value and risk dimensions
5	Scenarios, Recommendation, and 90-Day Plan	3 hours	Options, decision brief, and next steps

You do not need to prepare anything for today. Workshop 1 will come with its own pre-read – it takes about 10 minutes and will make the time more useful for everyone.

The Frameworks — A Quick Reference

You do not need to know these in depth today. This is here so the terms feel familiar when they come up.

FinOps

Connects technical platform decisions to financial outcomes. We use it to move from *"what do we spend?"* to *"what do we spend per useful outcome?"* — a concept called **unit economics**.

TBM — Technology Business Management

A standard way of classifying technology costs so that IT and Finance use the same language. Stops debates about what counts as a platform cost versus a workload cost.

DORA

Four metrics for software delivery performance: **Deployment frequency**, **Lead time for changes**, **Change failure rate**, and **Time to restore service**.

SPACE

Developer productivity across five areas: **Satisfaction and wellbeing**, **Performance**, **Activity**, **Communication and collaboration**, and **Efficiency and flow**.

Section 1 — Scope

We will agree on these together in the session. Use the space below to note what is agreed.

Platforms in Scope

Platform	In Scope?	Notes
[PLATFORM A]		
[PLATFORM B]		
[PLATFORM C]		
[PLATFORM D — scenario only]		

Environments

- Production
- Non-production
- Both
- Other: _____

Time Window

- Last full quarter
- Last 3 months
- Other: _____

Cost Types

- Cloud infrastructure (compute, storage, network)
- Platform tooling (observability, security, CI/CD)
- Subscriptions
- Operating effort (people and time)
- Other: _____

Anything we should not miss:

Anything that should stay out of scope:

Section 2 — Delivery Model

We will agree on this together in the session.

Option A

[ORGANISATION] runs the workshops using the toolkit independently, with the facilitator in a supporting role.

Option B

Facilitated jointly — the facilitator and [ORGANISATION] co-run each session together throughout the series.

Notes:

Section 3 — Minimum Viable Data

We will go through this together and put names against each item.

Data Needed	Owner	How Hard to Get?	Notes
Cluster inventory			
Cloud billing exports			
Platform subscription overview			
Tooling list			
Ops effort estimate			
Production app list / top 20			

Getting data ownership agreed in this session prevents delays in Workshop 2, where the baseline model depends on having clean inputs ready.

Section 4 — Ways of Working

Confirm these in the session and note the details below.

Shared Workspace Location

Version Control Approach

Recap Process

Workshop Cadence

Workshop Schedule

#	Date	Time	Location
1			
2			
3			
4			
5			

Section 5 — Questions and Notes

Use this space during the session to capture anything you want.

Questions	Decisions Made	Actions and Owners

✔ Within 24 hours of this session, you will receive a recap email covering: decisions made, actions and owners, and Workshop 1 confirmed date, time, and what to expect.

Glossary

Key terms you will encounter across the workshop series — plain English definitions for quick reference.

Term	Plain English
FinOps	A way for engineering and finance to manage platform costs together
TBM	A standard cost classification structure for technology spend
Unit Economics	Cost per useful outcome — e.g. cost per app per month
DORA	Four metrics for measuring software delivery performance
SPACE	A framework for measuring developer productivity
Showback	Showing teams what they spend without billing them for it
Chargeback	Billing teams directly for their platform usage
Cost Allocation	Distributing shared costs across teams or products
Baseline	The current state — what things cost today
Assumptions Register	A versioned log of every scope and cost treatment decision
Decision Brief	The final output — options and recommendation for leadership

Workshop 1 will come with its own pre-read. Read it before the session — it takes about 10 minutes and will make the time more useful for everyone.
