

Kubernetes Platform Economics Workshop 0

Setup and Expectations

[DATE] | [FACILITATOR]

What would make this
feel worthwhile to you,
personally, not just as a
team outcome?

What We Are Here to Do

Three Questions

What does our Kubernetes estate cost today? What value does it create for teams and the business? What are our options for improving cost per outcome without increasing risk?

Five Workshops

A structured series of sessions building from scope and baseline through to value, risk, and a concrete 90-day plan.

One Decision Brief

A clear, evidence-based output for leadership, Finance, and Procurement — grounded in shared facts and industry-standard frameworks.

What This Is — and What It Is Not

What it is

- A structured way to build a shared, trusted fact base
- Evidence-based options with clear trade-offs
- A decision brief for leadership, Finance, and Procurement
- Grounded in industry-standard frameworks

What it is not

- A cost-cutting exercise
- A vendor exercise or predetermined outcome
- A request to boil the ocean
- A platform argument

The Five Workshops

A progressive series of sessions — each building on the last — culminating in a complete decision brief.

Workshop	Title	Duration
0	Setup and Expectations	35–45 minutes
1	Scope, Glossary, and Rules	90 minutes
2	Cost Taxonomy and Baseline	2 hours
3	Allocation and Unit Economics	2 hours
4	Value and Risk Scorecard	90 minutes
5	Scenarios and 90-Day Plan	3 hours

Each workshop builds directly on the outputs of the previous session, creating a continuous chain of evidence from scope definition through to actionable scenarios.

The Frameworks We Use

Four industry-standard frameworks provide the analytical backbone of this engagement — ensuring our outputs are credible, comparable, and understood by Finance and leadership alike.

FinOps

Cost visibility, allocation, and unit economics — connecting technical decisions to financial outcomes across the platform estate.

TBM: Technology Business Management

A standard cost classification structure so IT and Finance work from the same language, reducing friction in reporting and decision-making.

DORA

Four metrics for software delivery performance: deployment frequency, lead time, change failure rate, and time to restore service.

SPACE

Developer productivity across five dimensions: Satisfaction, Performance, Activity, Communication, and Efficiency.

Today's Agenda

Workshop 0 runs for 35–45 minutes. Here is how we will use the time.

01	02	03
Welcome and Introductions	What We Are Doing and Why	Scope Shape
5 minutes	8 minutes	8 minutes
04	05	06
Delivery Model and Logistics	Data and Data Owners	Ways of Working and Next Steps
5 minutes	8 minutes	5 minutes
07		
Close and Recap		
3 minutes		

Scope Shape

These four questions define the boundaries of our analysis. We will capture answers live during this session.

Which platforms are in scope?

Identify all Kubernetes clusters and managed platform services to be included in the cost and value analysis.

Which environments are we including?

Production only, or also staging, development, and test environments? Each adds complexity and cost data.

What time window are we working with?

Typically the last 3–12 months of billing and operational data, depending on availability and stability.

What cost types are we including?

Cloud infrastructure, platform tooling, licensing, and internal labour — or a defined subset agreed by the group.

Delivery Model

Choose the model that best fits your team's capacity, confidence, and appetite for external support.

OPTION A

You Run It

Your team runs the workshops using the toolkit provided. You own the assumptions and decisions throughout. The model and outputs are built entirely by your team.

Best for: Teams with the capacity and confidence to self-serve, and who want full ownership of the process and outputs.

OPTION B

We Run It Together

We facilitate jointly. Agendas, templates, facilitation notes, and example outputs are included. The model and outputs are built collaboratively.

Best for: Teams who want acceleration, a second perspective, and confidence that the methodology is being applied correctly.

Minimum Viable Data

These are the data sets we need to get started. We will name an owner for each one live in this session.

Data Needed	Why We Need It	Owner
Cluster inventory	Defines scope – prevents gaps in coverage and ensures no platform is missed	
Cloud billing exports (AWS CUR / Azure)	Source of truth for actual spend – the foundation of the cost baseline	
Platform subscription overview	Separates fixed from variable cost, enabling accurate unit economics	
Tooling list	Identifies duplication across platforms and surfaces hidden cost	
Platform ops effort estimate (rough)	Captures the cost that invoices do not show – internal labour and time	
Production app list or top 20 workloads	Grounds unit economics in business reality rather than infrastructure abstraction	

 The owner column will be completed live during this session. Every data item needs a named owner before we close Workshop 0.

Ways of Working

Consistent habits across all five workshops keep the process clean, decisions traceable, and momentum high.

Documents

Everything lives in [LOCATION] – one place, always current. No version confusion, no lost files.

Versioning

Every document carries a version number and date. Changes are tracked so decisions can always be traced back.

Recaps

A short summary is sent within 24 hours of every session – covering decisions made, actions assigned, and the next session confirmed.

Cadence

[WORKSHOP DATES / AGREED CADENCE] – confirmed before we leave Workshop 0 so everyone can protect the time.

What We Have Agreed Today

Before we close Workshop 0, confirm that each of the following is in place.

- ✓ ~~Scope shape confirmed~~
- ✓ ~~Delivery model agreed~~
- ✓ ~~Data owners named~~
- ✓ ~~Working environment set up~~
- ✓ ~~Workshop 1 confirmed — [DATE] | [TIME]~~
- ✓ ~~Recap email coming within 24 hours~~

✓ When all six items are checked, Workshop 0 is complete. The recap email will land within 24 hours with a written record of every decision made today.

See You in Workshop 1

Workshop 1 – Scope, Glossary, and Rules of the Game

[DATE] | [TIME] | [LOCATION / LINK]

- ❏ Pre-read coming your way before the session. Come ready to align on definitions – the language we agree in Workshop 1 will carry through every session that follows.
